

## EXPERIENCE

---

### Google | Incoming Software Engineer Intern

Jun 2020 – Sept 2020

### University of California, Santa Cruz | Tutor & Reader – Natural Language Processing

Sept 2019 – Dec 2019

- Reinforced student understanding of core Natural Language Processing concepts through lab sections
- Assisted in the implementation and debugging of coding assignments using Python, SciKit Learn, and NLTK

### IBM | Software Development Intern

Jun 2019 – Sept 2019

- Worked on a physical access management tool for controlling privileges to 40+ data centers
- Added Active Directory as a source for an automated security framework, ensuring continuous compliance with security policies and accelerating issue detection time from 30+ days to a single day
- Built internal tools to automate audit workflows, saving over \$10,000 annually
- Wrote unit tests to automate tools testing using Pytest

### Second Harvest Food Bank | Volunteer Software Engineering Intern

Mar 2019 – Jun 2019

- Created and deployed a mobile-first web app for helping users locate foodbanks and their hours of availability
- Integrated with G Suite to generate map directions and improve accessibility for both users and maintainers

## EDUCATION

---

### Bachelor of Science, Computer Science

Jun 2017 – Jun 2020

University of California, Santa Cruz – 3.8 GPA

## ACHIEVEMENTS

---

### CruzHacks 2020 1<sup>st</sup> Place Google Cloud Category Winner | Java, Android, & Firebase

Jan 2020

Built an Android dashcam app that automatically scans nearby cars for matches with active Amber Alerts. Developed a police dashboard for tracking nearby sightings, and integrated with Notivize to push notifications via email.

### HackACM 2019 3<sup>rd</sup> Place Winner | Python & Flask

Apr 2019

Created a UCSC class lookup service to track course openings via web browser and Amazon Alexa voice assistant.

### HackACM 2018 Student Utility Category Winner | HTML & CSS

Mar 2018

Developed a mobile website to connect incoming UCSC students with campus resources and activities.

## SELECTED PROJECTS

---

### Monitori – A Positivity Encouraging Discord Bot | Javascript, Node.js, Python, VADER, SQLite

- Built a Discord bot to promote positive user engagement by penalizing users that express negative sentiment
- Optimized memory usage by automatically processing user messages after detecting the end of a conversation
- Deployed on Raspberry Pi with automated crash recovery

### Distributed Data Storage using Docker Containers | Python & Flask

- Built a remote storage solution that allows Docker containers to store key-value pairs as a distributed system
- Created a REST API using Flask for client communication and node additions
- Added data sharding capabilities and ensured crash tolerance through data replication & automatic resharding

### Search Engine | Python, Spacy, & Natural Language Toolkit

- Designed a system that finds the answer to any question by generating an excerpt from a library of text
- Implemented natural language processing techniques such as dependency parsing and discourse modeling

## SKILLS

---

**Languages:** Python, Java, Javascript, C, C++, HTML, CSS, Assembly, SQL, MATLAB  
**Technologies:** React, Node.js, Django, Flask, Pytest, NLTK, Tensorflow, NumPy  
**Software & Tools:** Git, Docker, Linux, JIRA, Make
