

## EDUCATION

---

### Bachelor of Science, Computer Science

Jun 2017 – Jan 2021

University of California, Santa Cruz – 3.78 GPA

## EXPERIENCE

---

### IBM | Software Development Intern

Jun 2019 – Sept 2019

- Created a tool to proactively identify security violations in Active Directory, ensuring continuous compliance with security policies and accelerating remediation from three weeks to a day
- Built a physical access database for monitoring access to data centers, replacing costly monthly reports with a continuous source of truth
- Developed internal tools to automate audit workflows, saving ~\$6,500 annually
- Built a dashboard to display live audit health and identify bottlenecks using Flask and Elasticsearch DSL
- Wrote unit tests to automate tools testing using Pytest

### Second Harvest Food Bank | Software Engineering Intern

Mar 2019 – Jun 2019

- Deployed a mobile-ready webapp for matching users with nearby foodbanks using Flask
- Integrated with Google Maps to visualize food bank distance and quickly generate directions
- Integrated with Google Calendar, allowing non-technical employees to update food bank locations and times
- Conducted user testing to better serve communities that may not have access to computers
- Coordinated with Second Harvest to establish project specifications and timelines

## SELECTED PROJECTS

---

### Project Release Dashboard | Javascript, React, Node.js, Express

Jul 2019 – Aug 2019

- Deployed a webapp for monitoring public reception to project releases and identifying desired changes
- Integrated with Twitter and Reddit to source data, and employed Watson NLP to derive actionable data
- Presented finished product to IBM executives for internal and market applications

### Distributed Database using Docker Containers | Python, Flask

Mar 2019 – Jun 2019

- Built a remote storage solution that allows Docker containers to store key-value pairs as a distributed system
- Created a REST API using Flask for client communication and message broadcasting
- Implemented a data sharding system, which allowed the system to scale linearly in capacity and throughput
- Ensured crash tolerance through data replication and automated data resharding
- Developed a message versioning system to enforce causal consistency between requests

### Search Engine | Python, NLTK

Feb 2019 – Mar 2019

- Designed a system that answers a question by returning the most relevant excerpt from a library of text
- Implemented natural language processing techniques such as dependency parsing and discourse modeling

### Sentiment Analysis Discord Bot | Node.js, NLTK, SciKit Learn, SQLite

Sept 2018 – Jun 2019

- Implemented a Discord bot designed to promote positive user engagement by rewarding points
- Trained Decision Tree, Naive Bayes, and SVM models to classify user sentiment using NLTK and SciKit Learn
- Increased classification accuracy by 60% by improving feature selection with techniques such as lemmatization

## ACHIEVEMENTS

---

### HackACM 2019 3<sup>rd</sup> Place Winner | Python & Flask

Apr 2019

Built a class lookup service for both web browsers and Amazon Alexa voice assistants

### HackACM 2018 Student Utility Category Winner | HTML, CSS, & Bootstrap

Mar 2018

Created a mobile website to connect incoming UCSC students with campus resources and activities

## SKILLS

---

Languages:	Java, Python, Javascript, C, HTML, CSS, Assembly, SQL, MATLAB
Technologies:	React, Node.js, Flask, Pytest, Express, Bootstrap, Swing, NLTK, Scikit Learn
Software & Tools:	Git, Docker, Postman, Elasticsearch, Kibana, Linux
